Project 5: Brief Report

For this project I decided to keep it simple, it would just be a couple links to the projects that I did in the past. Nobody will be confused about where to go to find my projects because I made it very clear and obvious. In the content of the landing page is in the links, the purpose is to show off the projects I did, so being simple seemed to be the best way to focus on that.

I have a style for gradients, if I were to make a website for myself, I would use gradients and boxed containers with round corners. It is like a card design pattern that I tend to follow. Something I would like to try in the future uses that card style to rotate between the different items that need to be shown.

By the time I launch my mobile game that I have been working on, I will have to make a website for it. I will use a lot of what I learned from this class there. Though I might use an online service like Wix to create a website much faster and nicer. At the end of the day if the website does its job, I think it is a good website.

Ultimately, I had a good time learning how websites work, the real meat of it is in the JavaScript and jQuery anyway, which is super easy to understand because I already know C++ and C# well. I feel well equipped to make some websites, though my creative direction is not there, implementing functionalities and features is something I can do.
